- Zero-crossing or random-on switching • AC or DC control input
- SCR output (thyristors) • Load current 10...80 A
- Max. load voltage 280, 530, 660 V AC (single-phase)
- Dielectric strength 4 000 Vrms (opto-isolation)
- MOV protection (built-in varistor)
- LED indicator (red) • Screw terminals
- Mounting on panel or on heatsinks
- Recognitions, certifications, directives: RoHS, REACH, CE, cULus, EAC

## Applications

Temperature chamber, food processing machinery, injection molding machine, incubator, oiling machines, HVAC, lighting, fountain controller.

## Basic technical data

Load voltage: 48...280 V AC, 48...530 V AC, 48...660 V AC

Control input: AC, DC

① Data given for ambient temperature ≤ 25 °C. Above 25 °C the maximum current decreases - see "Thermal derating curves", page 5.

② When connection cables to relay: please ensure, screws are torqued down properly.

③ Relay must be mounted to proper sized heatsink, based on "Thermal derating curves". Between relay and heatsink must be used thermal pad.

**Mounting, accessories for relays**

Relays **RSR52** are designed for: • direct mounting on panel • mounting on heatsinks **RH**.

For **RSR52** relays we offer thermal pads **RTP-10**.

### Thermal derating curves

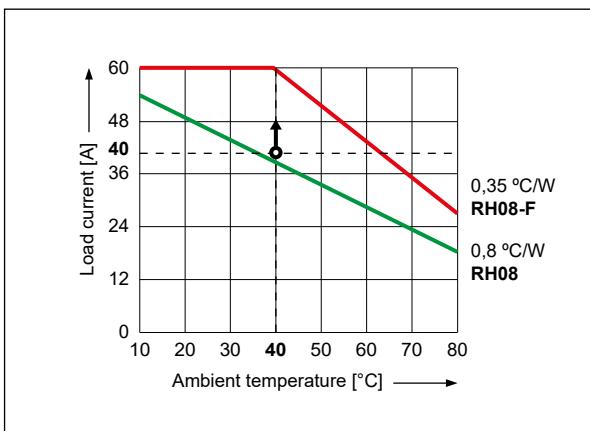

### To select the proper sized heatsink:

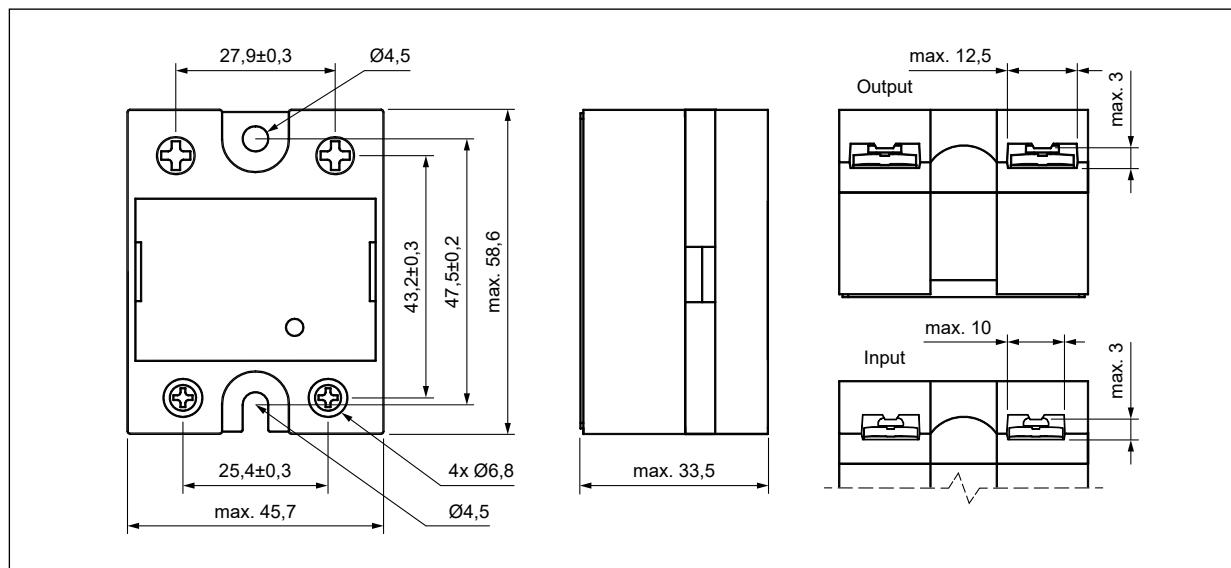

- determine the load current and the maximum ambient temperature the relay will be exposed to,
- use the "Thermal derating curves" (see above).

Example: for a single-phase **RSR52 60 A**, at 40 A load current and ambient temperature at 40 °C:

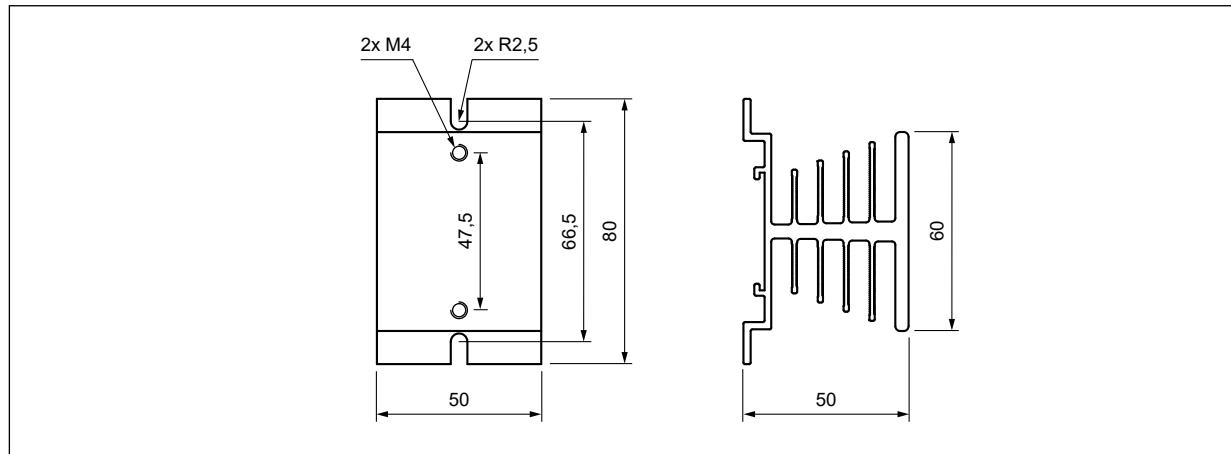

- on the Y axis we find the current value for which we draw a line perpendicular to Y,
- on the X axis we find the ambient temperature for which we draw a line perpendicular to X,
- we determine the intersection of both lines,
- read the heatsink rating – **always choose the rating above your point**: we need a 0,35 °C/W sized heatsink, since the 0,8 °C/W heatsink will not ensure sufficient cooling of the solid state relay.
